

What I Learned from the To-Do List Project

This document outlines the key concepts and skills I learned while working on my To-Do List web application project. These include UI design, JavaScript interactivity, and browser storage.

The main concepts I learned:

- How to make an animated circular progress bar
- How to drag and drop elements from one div to another
- Using CSS Grid
- Switching between dark and light themes using CSS variables
- Storing and retrieving data using localStorage
